

TEAR STRIP - option

per cellofanatrici SpeedBOX

NEW!!

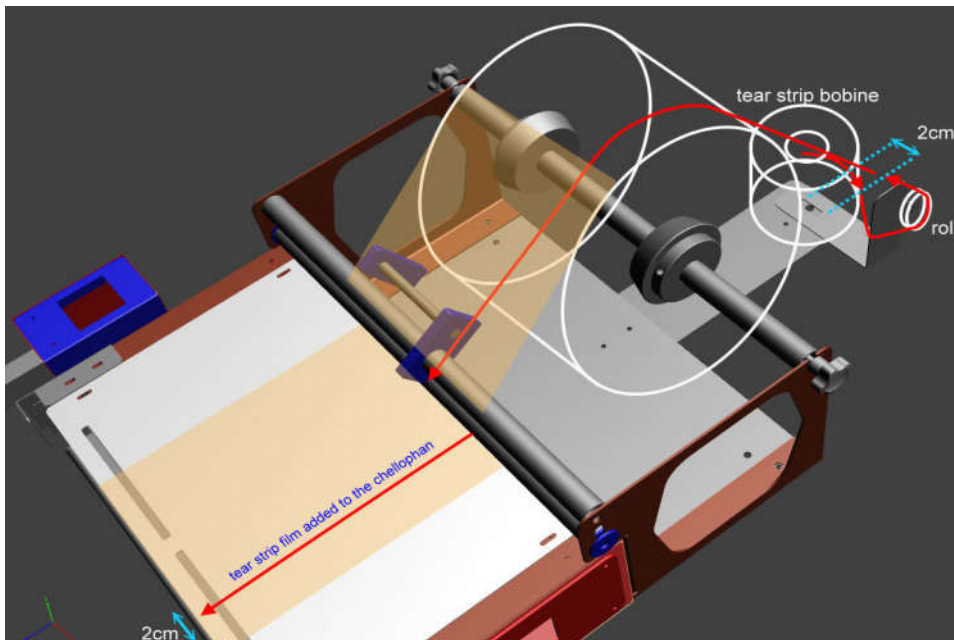

OPEN IT EASY!

speedBOX
UNIVERSAL PACKAGING SYSTEM
made in Italy

It is now available for SpeedBOX cellophane machines the brand new TEAR-STRIP module, an option for those customers wishing to apply a PVC wire (tear strip) to their BOX to allow the user to easily unwrap the cellophane from the packaging. The module is applied posterior to SpeedBOX and includes one TEAR-STRIP bobine. The tape must be integrated into the cellophane wrapping procedure as shown in the diagram below. The system designed by EUROPALINK does not alter the normal operation of closing your boxes, the operator will only have to choose where to apply the tape and pay attention to the alignments. A final small opening incision is suggested to be applied sequentially with a cutter a very fast operation.
